Extra Credit Assignment – Article review

Step 1 – Find and claim a reviewable item

Find an item to review. Could be a book, paper, web article, blog, etc. – should be related to our EID class topics: IoT, Cloud, Device Design, UX, Prototyping, etc.

Once you've identified your topic, post the link or reference you'll review in this online Google Doc, but make sure it is not a duplicate entry.

You may NOT completely duplicate an item already under review. You can review an article from the same site as someone else, just not the exact same article.

https://docs.google.com/document/d/1RCPAG3ap1FAMR2l11Sat_ZMFOW3O_ewgszSc3euvsFQ/edit?usp=sharing

Step 2 – Write your review

Your review should include the following (in about a three paragraph one-page paper, more if you like):

- Your topic under review (including a link if available)
- Your name
- A description of the item under review (a paragraph)
- How it applies to EID subject(s) (a paragraph)
- What you personally think of the article and what you got from the review – how would you use it in future (or not) (a paragraph)

Step 3 – Submit your review for grading

The grade for this paper will be a maximum of 10 extra credit quiz points. The 10 points will be reduced by any extra credit quiz points you've already earned in class. So, if you have 4 extra credit points from class activities, the maximum award for this paper will be 6. This paper lets you maximize available extra credit quiz points.

This paper must be submitted as a PDF document before Monday 12/9 at 4 PM. No late entries will be accepted.
